

JORDY FABIAN VILLAMIL LAWYER

Desarrollador Full-Stack | QA Tester | Scrum Practitioner | IA Agents

Bogota D.C, Colombia | +57 320 425 42 87

jordyvillamilletras@gmail.com | linkedin.com/in/Jordy-Villamil | jordyvillamil.github.io

PROFESSIONAL PROFILE

Software Engineering student with training as a Technologist in Software Analysis and Development, specialization in Cybersecurity (Google & Universidad de los Andes) and certification in QA & Testing. Experience in test design, automation and strategies in Agile/DevOps environments. My background in Full-Stack development, Secure SDLC and the advanced use of generative AI (Claude Code, Model Context Protocol) allows me to understand the complete software cycle, accelerate workflows and identify failures with deep technical criteria. Active gamer with natural ability for playtesting. English level: B1.

TECHNICAL SKILLS

Q Artificial Intelligence & GenAI: Claude API integration, AI-assisted development with Claude Code, Model Context Protocol (MCP), workflow automation.

QA & Testing: Design and execution of test cases, functional, exploratory and regression tests, bug reporting, performance testing, basic automation, QA strategies.

Backend: Python, Django, Django REST Framework, PHP, Laravel, API RESTful, Autenticación JWT, MySQL, PostgreSQL.

Frontend: React, Next.js, TypeScript, JavaScript ES6+, Tailwind CSS, Framer Motion, HTML5, CSS3.

DevOps and Security: Docker, Docker Compose, CI/CD, GitHub Actions, Secure SDLC, Vulnerability Scanning, Backup Management, DRP.

Architectures: Hexagonal, Microservices, N-Layers, Monolithic.

PROFESSIONAL EXPERIENCE

Computer Center Assistant (Internship) – HEON HEALTH ONLINE, Bogota, Colombia

April 2025 – October 2025

- Ensure business continuity through scheduled management and restore of critical virtual machines and databases.
- Implemented a system of daily verification of backups generating integrity reports for management decisions.
- I participated in tests of the Disaster Recovery Plan (DRP), identifying bottlenecks and reinforcing protocols.
- Contributed to the development and maintenance of internal applications using Django and React.

FEATURED PROJECTS

Finan-Core – Personal Financial Management System

Technologies: PHP, Laravel, MySQL, Docker, Hexagonal Architecture

- I designed hexagonal architecture aimed at maximum stability and maintainability of the code.
- I developed RESTful APIs with Laravel following SOLID principles and enterprise design patterns.
- Implemented and verified transaction management, automatic categorization and financial reporting.

EduGestión 360 – Full-Stack Academic Management Platform

Technologies: React, Django, Django REST Framework, MySQL, Docker

- I designed and deployed 100% containerized full-stack architecture with Docker Compose.
- Validated authentication and role-based authorization (JWT) flows using functional and regression testing.
- Built and verified modular RESTful API for CRUD management of users, grades, courses, and subjects.

TimePieces – E-commerce with Interactive 3D Visualization

Tecnologías: Vite, React Three Fiber, Django, PostgreSQL, TypeScript, Docker

- I developed immersive frontend with React Three Fiber allowing interaction with 3D models in real time.
- I built high-performance RESTful APIs with Django 5 and Django REST Framework.
- I implemented TypeScript to ensure type-safety and maintainability of the frontend code.

EWEADN Landing Page – Modern Frontend Prototype

Tecnologías: React, TypeScript, Vite, Framer Motion, Tailwind CSS

- I developed prototype implementing 2025 design trends including Video Hero and Glassmorphism effects.
- I integrated high-performance (60fps) smooth animations and micro-interactions with Framer Motion.
- I used Tailwind CSS for 100% responsive utility-first design optimized with Vite.

ACL (Logistics Sorting Agent) – AI-powered Virtual Assistant

Technologies: Python, FastAPI, Node.js, Google Gemini API, Hexagonal Architecture, Webhooks

- I developed a generative AI agent (Google Gemini) to automate the classification and routing of unstructured documents (PDFs, images) via WhatsApp, optimizing billing and planning flows.
- I designed a modular backend based on Hexagonal Architecture with FastAPI, isolating the domain logic from external integrations.
- I implemented a microservices architecture, orchestrating real-time communication between a bridge in Node.js/Express and the Python backend using webhooks.

Synapse Trade – Autonomous Quantitative Analysis and AI Broker

Technologies: Python (FastAPI), MCP SDK, Google Claude/Gemini/OpenAI, Pandas, Plotly, Hexagonal Architecture.

- I developed a financial broker capable of executing 10-step analysis pipelines, including Monte Carlo simulations, risk metrics (Sharpe, VaR) and backtesting of 14 trading strategies.
- I implemented an MCP (Model Context Protocol) server that exposes market data tools in real time, allowing LLMs (such as Claude or GPT) to perform technical and financial analysis using natural language.
- I created an explainability engine that breaks down the agent's feasibility verdict (Score A-F) factor by factor, integrating news sentiment analysis using NLP.
- I designed the solution under a hexagonal architecture, allowing full interchangeability of data providers (Yahoo Finance, Alpha Vantage) and language models.

VisaJump – Autonomous Consular Automation Agent

Tecnologías: Python (FastAPI), Playwright Stealth, Celery, Redis, PostgreSQL, Docker, AES-256.

- I developed an intelligent agent for the automatic monitoring and rescheduling of consular appointments, implementing "Stealth Browsing" techniques to evade anti-bot systems.
- I designed a robust architecture based on Celery and Redis to handle asynchronous task queues and randomized periodic execution.
- Implemented a high-level security system using AES-256 (Fernet) encryption for user credential protection at rest and JWT authentication for the API.
- I orchestrated the full deployment using Docker Compose, ensuring scalability and consistency of the environment between development and production.

TRAINING AND CERTIFICATIONS

- **Software Engineering** – Politécnico Grancolombiano (Ongoing)

- **Specialized Program: Quality Assurance and Software Testing** – Board Infinity
- **Software Analysis and Development Technologist** – SENA
- **Specialization in Cybersecurity** – Universidad de los Andes (Coursera)
- **Google Cybersecurity Professional Certificate** – Google (Coursera)
- **Specialized Courses in AI Ecosystem:** Claude API, Claude Code & Model Context Protocol (MCP) – Anthropic

SOFT SKILLS

Complex Problem Solving, Continuous Learning, Adaptability, Critical and Analytical Thinking, Creativity and Innovation, Emotional Intelligence, Collaboration and Teamwork, Effective Communication
